

Xpressbanker
The future of banking is here!

Xpressbanker – The Bank-In-A-Box.....

The growth of the Indian economy has resulted in exponential transaction growth. Banks are facing challenges to meet the burgeoning transaction load, while grappling with a virtual war for talent. Rising customer expectations further add to the complexity of managing transactions. Currently, Indian banks are using both branch banking networks as well as ATM networks to meet the transactional load. However, queuing is still the name of the game and many expensive and time consuming transactions are still conducted on the counter area!

Welcome to the era of the hybrid bank. The face of banking is changing.

The installation of self service solutions frees the employee from handling routine transactions sparing precious time to advice customers. The stage is set for the traditional branch setup giving way to a new hybrid set up that incorporates migration of counter services to self-service. The latest self-service technology allows banks to realize the branch office concept of the future.

The Forbes Xpress banker, the self service offering from Forbes Technosys enables you to move applications from manned counters to self service transaction stations. These stations are placed within bank branches and can carry out a multitude of tasks.

FORBES XPRESSBANKER RANGE

Model
